Forecast-scaled incoherence

$$100\,\mathrm{mean}_{p,t}\left[\frac{2|P-C|}{|P|+|C|}\right]$$

P: parent forecast C: child forecast sum Y: parent actual

All 22 methods shown. Grey points: reconciled methods and Naive, numerically ≈ 0%.

Equal weight per parent–time comparison. GEF2017 panels share a scale; AusGrid2013 has its own scale.
